

## A B S T R A C T

A folding table tennis table comprising a support,  
two table tops that are movable relative to the support  
5 between a horizontal position and a vertical position,  
each table top co-operating with the support to form a  
structure of configuration that is reversibly ~~deformable~~  
foldable between an unfolded state corresponding to the  
horizontal position of the table top and a folded state  
10 corresponding to the vertical position of the table top,  
which structure includes a retractable ~~locking means~~ lock  
to lock it in at least one of ~~said~~ the two states.  
~~According to a characteristic of the invention, the~~  
~~deformable~~ The foldable structure includes an abutment  
15 ~~means~~ that ~~engage~~ engages when its configuration comes  
close to a configuration corresponding to a locked state,  
thereby opposing reversibility in ~~said~~ that  
configuration.
